Buffalo Turbine Launches District Disinfector Series To Combat COVID-19

SPRINGVILLE, NY [April 15, 2020] - Buffalo Turbine proudly announces the District Disinfector Series, their latest line of sprayers designed to aid municipalities and commercial operations in the fight against COVID-19 coronavirus. This easy to deploy self-contained sprayer (use with any truck or utility vehicle) is capable of disinfecting large areas. Applications may include, but are not limited to cross walks, benches, lamp posts, mail boxes, bus stops, streets, sidewalks, building facades, park equipment, and stadiums. The sprayer is compatible with EPA, NYS DEC, CDC, and WHO registered and approved disinfectants.

Buffalo Turbine, headquartered in Springville, New York, has assisted national defense and public health organizations control the spread of virus and disease outbreaks for 75 years through their sprayer products. Most recently, with Zika virus control throughout the Gulf Coast states in 2016.

“The newly released Buffalo Turbine Sprayers for disinfecting large areas is just a minor adaptation of existing Buffalo Turbine Sprayers,” states Buffalo Turbine owner, Louis Horschel. “Buffalo Turbine has been a world leader in spraying technologies for wide area vector control for 75 years now. Our expertise in this arena has led to the development of these new models. With our engineering and manufacturing in Springville NY, we were able to quickly marry our proprietary Rotary Atomizing Nozzle with our line of high powered blowers. Our designers and engineers were able to put together a self-contained blower to meet the current needs for efficient disinfecting capabilities on a broad scale. Historically where there has been a need for spraying to mitigate a public health problem, thousands have turned to Buffalo Turbine to solve the problem. Worldwide, ask your mosquito and vector control professionals, they can attest to Buffalo Turbine’s products. The trusted name in Public Health 75 years and counting! BUFFALO TURBINE!”

The District Disinfector series requires significantly less manual labor to apply disinfectant. Series models feature the unique and effective Buffalo Turbine Turbulent Air Sprayer with rotary atomizing nozzle. The turbulent air ensures maximum coverage of areas missed by many conventional sprayers. The more complete, faster coverage, also assures workers have minimal exposure to hazards.

The District Disinfector Series is comprised of 4 models, each specifically tailored to different needs.

1. BT-CKB4-MDSS. Carbureted engine.
2. BT-CKB5EFI-MDSS. Electronic fuel injection.
3. BT-CKB3SQ-MDSS. Two turbines, dual spray nozzles.
4. BT-MEGA-MDSS. Our most powerful.

DISTRICT DISINFECTOR SERIES FEATURES

- Self-contained, engine driven, use with any pickup truck or utility vehicle.
- Turbulent air for complete coverage
- Droplet size: 50-200 microns.
- Horizontal throw: up to 125 ft.
- Vertical throw: up to 100 ft.
- Adjustable atomizing nozzle flow rate: 0-10 gal./min.
- Sprays any compatible disinfectant.
- Disinfect large areas with minimum human exposure.
- Same technology combated Zika virus in 2016.
- Trailer & tank options available.

Orders may be placed directly to Buffalo Turbine or through its dealer network. For more information, please call (716) 592-2700 or visit www.BuffaloTurbine.com.

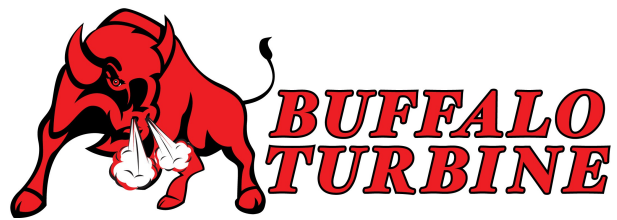

About Buffalo Turbine

Buffalo Turbine is an American manufacturer of turbine style sprayers and blowers located in Springville, New York. The diverse product line provides customers the ability to choose features that best suits their application and budget. Products are made from precision machined components that provide long-lasting dependability. Popular uses include, but not limited to applying disinfectant, vector control golf, sports turf, paving contractors, solar farms, poultry barns, airports, racetracks, mines, waste transfer stations, landfills, demolition sites, and much more. For more information, please contact Buffalo Turbine at 716-592-2700 or visit www.buffaloturbine.com Established 1945. Made in USA.
